EXPERTS IN WOMEN’S HEALTH
ABOUT VIA

Vascular Interventional Associates (VIA) is a regional independent clinical vascular and interventional radiology practice with multiple satellite clinics in surrounding areas.

Since the year 2000, VIA has been committed to providing the highest quality patient care in an outpatient setting using cutting edge image guided therapy.

The specialists at VIA have expertise in the latest minimally invasive treatment for various vascular and non vascular conditions affecting women’s health. Most of our procedures are performed in the comfort of an office-based lab setting.

OUTPATIENT THERAPY

- Most procedures are performed in an office-based lab without the need for hospitalization.
- General anesthesia is not required.
- Pain and recovery time are often significantly reduced.
- There is less risk of infection.
- Close coordination with our referring physicians.
- Follow-up care for all patients treated.
- The patient is often back to normal routine within days of procedure.
- There is little or no incision.
- The procedures are often less expensive than surgery or other alternatives.
- Greater comfort and convenience to the patient.

OUR CLINICAL TEAM

Azher Iqbal, M.D.
Jonathan Fogel, M.D.
Blanka Heary, P.A.
“Advances in technology have allowed minimally invasive treatments to be performed safely in office based setting.”
- Dr. Iqbal

**PARTNER WITH VIA TO PROVIDE THE BEST PATIENT CARE**

**VIA WOMEN’S HEALTH SERVICES**

**Pelvic Congestion Syndrome**
Embolization of the ovarian vein and pelvic varicose veins can provide effective management of chronic pelvic pain associated with pelvic congestion.

**Uterine Fibroids**
Uterine artery embolization using embolic particles to occlude the uterine arteries has been reported as a relatively safe, effective and durable nonsurgical alternative to hysterectomy in fibroid related symptoms.

**Uterine artery embolization using embolic particles to occlude the uterine arteries has been reported as a relatively safe, effective and durable nonsurgical alternative to hysterectomy in fibroid related symptoms.**

**Venous Insufficiency**
Ultrasound guided radiofrequency ablation and sclerotherapy are performed for the treatment of painful varicose veins, edema, restless legs and venous ulcers.

**Migraines**
Fluoroscopically guided sphenopalatine ganglion block provides migraine management by catheter directed Lidocaine delivery to the ganglion.

**Vertebral Compression Fractures**
Balloon kyphoplasty is a minimally invasive, percutaneous procedure to treat osteoporotic and oncologic fractures to manage pain and progression of fracture.

**Peripheral Arterial Disease**
New technological advances now allow us to perform endovascular interventions in the below the knee and below the ankle vessels in managing claudication, foot ulcers and critical limb ischemia.
